

**Minden Gardnerville Sanitation District
District Manager's Report
May 2008**

1. EDU allocations: 25.44 units of capacity were allocated during the month of April. On the upcoming agenda is a request by Raley's to purchase 46.74 EDU's. Although, while not yet determined, they may revise the plans in an effort to reduce the capacity requirements.
2. Effluent Disposal: No effluent was disposed during the month of April.
3. Pump station # 2: An issue has arisen with the project and the wetwell structure was removed and is being reconstructed. Bruce is expected to have more information available at the upcoming meeting.
4. Sewer Laterals: On the upcoming agenda is a request for reimbursement of the sewer lateral repair at 1749 Bougainvillea.

The lateral on County Road that was installed without MGSD permits has been excavated by the contractor and inspected by MGSD personnel.

The sewer main on 10th street was televised and determined that the property in question was in fact properly connected to the main. The issue, as reported to me, was found to have been within the private lateral itself.

5. Park Cattle Company: Bruce Scott and I met with Rob Anderson of R.O. Anderson Engineering and representatives of Park Cattle Company, where they explained their upcoming proposed project. Some areas will require an adjustment of the MGSD boundaries. They have requested a special meeting on May 22nd to discuss their proposal.
6. Lab Inspection: A representative from NDEP visited the premises for an inspection of the laboratory and the procedures within the lab. No violations were noted and we were commended on the appearance and operation of the facilities.

Frank T. Johnson
District Manager
